

ProSIP® Network Health Check

7-day performance analysis of your network

ProSIP® Network Health Check is a 7-day analysis of your network that can determine how your network is performing, what it's being used for and if it's VoIP Ready.

Today's most successful businesses rely on their network for critical business operations. When your network isn't performing, your business isn't either. Staying competitive requires monitoring and responding rapidly to changes on your network – and VoIP call quality is directly impacted by the performance of your network.

Bandwidth - Is your ISP delivering what you pay for?

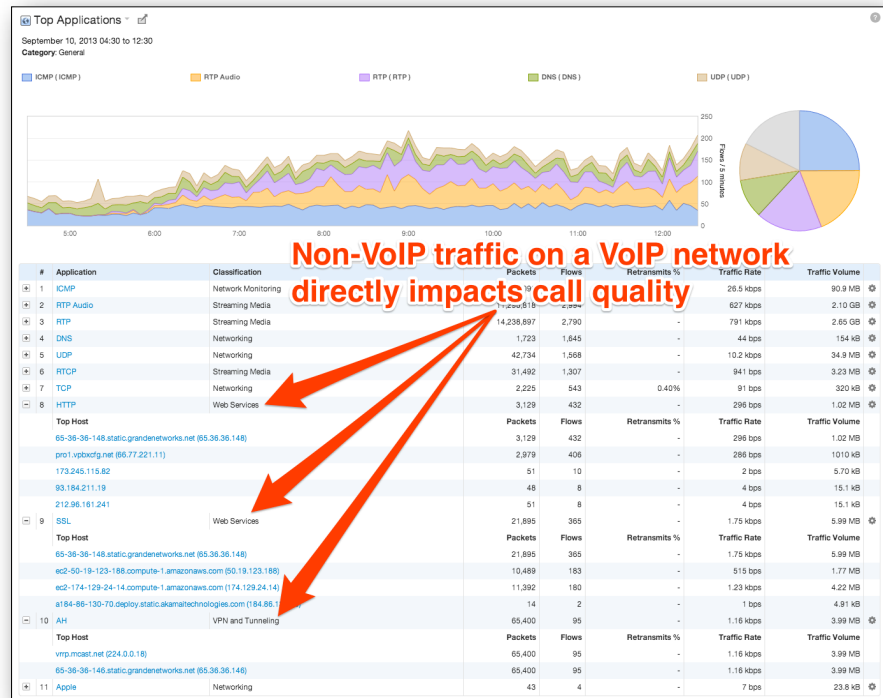

Today's Internet speed tests claim to represent your ISP's performance - they don't. Without constant monitoring, your ISP may have the single largest impact on your business operations. Would't you love to know that your ISP is delivering what you pay for 24/7?

Capacity - Do you know what is streaming over your network?

With the rise in social networking and streaming content, VoIP call quality is under attack from all directions and network congestion is the top cause for poor call quality. Streaming content from sites like Facebook, YouTube or Netflix is not only impacting productivity, it's likely impacting your teams ability to communicate effectively.

Performance - Is your network VoIP Ready?

Mobile devices in your business create new and unexpected demands on your network. A single iPhone accessing iTunes can have a dramatic impact on VoIP call quality.

ProSIP® Network Health Check - Network Performance Analysis

The ProSIP® Network Health Check delivers an on-site network performance analysis, during which the ProSIP® team working with your team, deploys the ProSIP® monitoring solution. Over the course of 7 days, network performance data is collected and reviewed by the ProSIP® team. A performance improvement plan based on the results is presented to your team. ProSIP® NHC provides insight into how your network is performing and helps you prepare for major service deployments, like VoIP.

ProSIP® Total Assurance Monitoring - 24/7 Performance Monitoring

The ProSIP® Total Assurance Monitoring solution provides 24/7 performance monitoring of your network. ProSIP® TAM provides detailed insight into how your network is used by your team – which devices are using the most bandwidth, accessing social media, streaming content and much more. ProSIP® TAM includes customizable alerts for changes to network traffic and a monthly analysis and performance report by a certified ProSIP Network Engineer.

ProSIP® network traffic analysis and monitoring services provide unparalleled insight into how your is network performing and being used.
