Advanced communication technologies along with the rise of internet connected devices and BYOD is disrupting the telecom industry. With a requirement to connect over billions of devices, telecommunications service providers are turning their focus towards multi-device and multi-network services. Further, consumers today have adapted to network connectivity with speed. The expansion of mobile ecosystem, and simultaneously the demand for high-bandwidth services like the video and gaming is causing tremendous pressure on the telecommunication industry to increase the quality and speed of connectivity.

Furthermore, advanced networking technologies are turning the world into a connected digital ecosystem were digitization has become the crux of workforce organizations. With more organizations rapidly implementing new communication methodologies in their business operations, it has become prerogative for the telecom companies to perform conscientiously well in this arena to keep up with the growing pace. For telecom companies, success will depend on acquiring greater knowledge and understanding of coherent digital ecosystems along with making sure the digital ecosystems are efficient.

Apropos to these scenarios and trends in the Telecommunication landscape, CIOReview’s expert panel evaluated the solutions and capacities of ‘20 Most Promising Telecommunication Solutions Providers’. The companies featured here provide a look into how their solutions work in the real world and assess the right solutions to shape up against market competition and industry challenges.

In our selection process, we looked at the vendor’s capability to fulfill the need for cost-effective and flexible solutions that add value to the Telecommunication landscape. We present to you CIO Review 20 Most Promising Telecommunications Solution Providers 2015.

**Company:** Virtual PBX  
**Description:** A privately held communications service provider and a pioneer in private branch exchange (PBX) technology called a virtual or hosted PBX

**Key Person:** Paul Hammond  
**Website:** www.virtualpbx.com
VirtualPBX
Delivering Seamless Connectivity and Networking Capabilities

For Paul Hammond, CEO and President of VirtualPBX, a company’s communication network is like the circulatory system where in good health is critical for an overall well-being of the organism and any changes to it can be incredibly disruptive. “A working network and a business phone system is a company’s lifeline to the outside world,” he says. However, as new trends are re-defining the current telecom networking ecosystem, companies are looking for faster access to more devices. Service providers are moving toward a fully-integrated and flexible unified communications platform. To improve the value proposition for the customers, VirtualPBX, headquartered in San Jose, CA, provides efficient communication services and solutions that come with the deepest and strongest features in the industry. “We help customers to effectively manage their phone systems and communication networks,” states Hammond.

VirtualPBX extends the safety benefits of a cloud based system to traditional phone service users, with a product, PBX (Private Branch Exchange) Parachute that offers benefits like remote backup support and instant failover protection. “PBX Parachute is an automatic failover protection.”

Apart from delivering efficient products for VoIP-based phone systems, VirtualPBX also provides Network Health Check solutions for network monitoring and bandwidth boosting. “By constantly conducting examination of the network, we can detect any vulnerabilities or unrealized opportunities to the phone system,” explains Hammond. The engineers assemble the data and submit network optimization suggestions to handle any number of variables, including break-time video streaming, bandwidth prioritization, and even source an entirely new ISP. “Network Health Check is a highly-focused Concierge Service for network optimization,” affirms Hammond.

VirtualPBX’s solutions and services have brought indispensable enhancements to businesses and have helped clients to achieve better operational efficiency. In an implementation highlight, Coit Staffing, a company providing strategic staffing solutions, was looking to publish a single national toll-free number and route customer calls to the closest offices. These offices served as hubs for their vast network of clients. By implementing VirtualPBX’s virtual phone system, the customer was able to maintain a uniform national number that was tethered to each location. The system further provided the flexibility to add or remove extensions or follow agents as they visited clients and job sites.

“Our trained support staff working alongside with the sales, marketing, and engineering teams to provide the highest quality of customer service in the industry”
