

Outbound Dialing Guide

There are two settings under the **Config** tab of each extension to configure the VirtualPBX system for dialing contact phone numbers:

“Outbound Connection Privilege” is the location where the system is allowed to dial to find that extension owner.

A screenshot of the 'Extension Edit' page for 'Luke Skywalker Ext. 825'. The page is divided into several sections: Profile Information, Extension Time, SmartID Caller ID Delivery, Call Recording, and Settings. The 'Settings' section on the right contains a table with 'Yes' and 'No' columns. Two rows in this table are circled in red: 'Outbound Connection Privilege' and 'Outbound Dialing Privilege', both of which have 'US & Canada' selected in a dropdown menu.

	Yes	No
Allowed to Receive Voice/Fax Mail:	<input checked="" type="radio"/>	<input type="radio"/>
Admin Privilege:	<input checked="" type="radio"/>	<input type="radio"/>
Mail Only Extension:	<input type="radio"/>	<input checked="" type="radio"/>
Appears in Dial by Name Directory:	<input checked="" type="radio"/>	<input type="radio"/>
Extension Locked:	<input type="radio"/>	<input checked="" type="radio"/>
Force record of name and greeting:	<input checked="" type="radio"/>	<input type="radio"/>

“**Outbound Dialing Privilege**” is the location(s) where that extension owner is allowed to call when they are using the system for making an outbound call using the Virtual Calling Card feature, which allows the call recipient to see the VirtualPBX phone number as the caller ID.

In both of the above settings there are four options:

- **Continental US:** The VirtualPBX system can dial out only to a continental United States phone number
- **Canada:** This takes the Continental US settings and adds the Canadian region to it
- **World:** The VirtualPBX system can dial out to any valid phone number in the world to find you. **Note:** The World option will only show up if International dialing has been enabled on the account.
- **None:** The VirtualPBX system will not dial out to any phone number, even if it is listed as a contact phone number under the Call Routing tab.

More information about this feature can be found using the Help Bubble (orange question mark) above that section of the web interface.
